Task
• Download Vulln.zip from teams.
• Deploy a virtual windows 7 instance and copy the Vulln.zip into it.
• Unzip the zip file. You will find two files named exploit.py and Vuln_Program_Stream.exe
• Download and install python 2.7.* or 3.5.*
• Run the exploit script II (exploit2.py- check today's folder) to generate the payload.
o Replace the shellcode in the exploit2.py
• Install Vuln_Program_Stream.exe and Run the same Analysis
• Try to crash the Vuln_Program_Stream program and exploit it.
• Change the default trigger from cmd.exe to calc.exe (Use msfvenom in Kali linux).
Example:
msfvenom -a x86 --platform windows -p windows/exec CMD=calc -e x86/alpha_mixed -b "\x00\x14\x09\x0a\x0d" -f python
**• Change the default trigger to open control panel.**

Analysis- • Try to crash the Vuln_Program_Stream program and exploit it.
Script :

```python
